Education

- | | | |
|-----------|---|-----------------------|
| MS | National Taiwan University , Economics
Machine Learning, Econometrics, Causal Inference <ul style="list-style-type: none"> GPA: 4.09/4.30 (Highest: 4.30) Core Coursework: Machine Learning and Causal Inference; Machine Learning and Econometrics; Applied Econometrics; Data Science for Social Research Master's Thesis: Applied causal inference and event study methods to large-scale real-world administrative data (tens of millions of records) to examine how policies and major events influence individual decision-making. | Sept 2021 – June 2023 |
| BS | National Taiwan University , Economics & Philosophy
Economic Thinking, Logical Thinking, Critical Thinking <ul style="list-style-type: none"> GPA: 4.00/4.30 (Highest: 4.30) Economics Training: Microeconomics; Macroeconomics; Econometrics; Game Theory; Experimental Economics Mathematical & Logical Foundations: Mathematical Analysis; Set Theory; Classical Logic; Non-classical Logic | Sept 2016 – June 2021 |

Experience

- | | | |
|---|---|--|
| Yulon Group, Digital Transformation , Data Analyst | A/B Testing, Statistical Analysis, Machine Learning, Causal Machine Learning, Tableau, GCP <ul style="list-style-type: none"> CarPlus Car Rental: Designed and executed A/B tests to evaluate the impact of real-time incentives on short-term rental customers' conversion behavior, increasing booking conversion rates by 5%. Built an operational KPI dashboard for car-sharing services to support fleet dispatching and station open/close decisions, reducing weekly decision-making time by 50%+. LINE GO Taxi: Led multiple incentive strategy optimization analyses using causal machine learning (Causal Forest), linear programming, and social network analysis. Improved incentive allocation efficiency from different decision perspectives, achieving 10–20% reductions in total subsidy costs while maintaining service performance. Sinjang Used Cars: Developed a used-car auction price prediction model using LightGBM, providing accurate pricing benchmarks to reduce acquisition risk. Model performance was within 5% of internal expert judgments. Built historical trend dashboards to systematically track price movements across vehicle types, supporting residual value evaluation and long-term analysis. Additional Contributions: Proactively planned and delivered 10+ internal knowledge-sharing sessions on data science topics. Mentored one data analyst intern and one junior analyst, enabling rapid onboarding to production projects. Participated in three university guest lectures, sharing real-world data analytics case studies with nearly 100 students, fostering industry-academia exchange. | June 2024 – present
1 year 8 months |

Shopee Xpress, Business Intelligence, Data Engineer Intern

Sept 2022 – Mar 2023

SQL, Apps Script, Dynamic Data Report

7 months

- Served as the cross-functional data access and analytics interface, translating business requirements into structured SQL queries and metric definitions; designed and maintained 10+ automated, decision-oriented dashboards, enabling non-technical teams to consistently access reliable and verifiable data.
- Optimized data storage and access workflows for the inventory management team by replacing high-latency spreadsheet formulas with Google Apps Script, reducing page load time by 50%+ and significantly improving daily operational efficiency.
- Owned maintenance and data quality control for core buyer-seller operational dashboards, introduced 3 key metrics, and proactively identified and corrected 10+ data issues, substantially improving metric reliability and decision confidence.
- Designed and built an end-to-end data pipeline from scratch for a reusable packaging initiative, integrating usage logs and status transitions to systematically track lifecycle stages, serving as a primary decision input for procurement sizing and resource allocation.

Shopee, Cross Border, Logistics Analyst Intern

Mar 2022 – Aug 2022

Cost-Benefit Estimation, Business Analysis, VBA

6 months

- Led pre-campaign cost-benefit estimation and post-campaign performance validation for cross-border free-shipping promotions, analyzing 5 large-scale campaigns (NT\$1M+ each) and supporting activity design and resource allocation decisions to maximize profitability.
- Built a systematic performance tracking and comparison framework for three major cross-border seller programs, validated data consistency and business logic, and automated reporting workflows with VBA, reducing manual effort by 50%+.
- Conducted impact analyses of policy and strategy changes in cross-border operations, including customs identity verification requirements, new incentive mechanisms, and logistics channel adjustments, assessing substitution and cannibalization effects on user behavior and program performance.

Projects

ML Analysis Dashboard[GitHub](#)

- Developed a model error analysis and interpretability dashboard, integrating SHAP value visualization to help teams quickly identify prediction biases and optimize model performance.
- Implemented multi-model version comparison and interactive data filtering functions to improve model iteration efficiency and debugging precision.
- Transformed complex model behaviors into visual insights, promoting communication efficiency between data science teams and business stakeholders.

ParkFinder[GitHub](#)

- Built an end-to-end real-time parking information platform, integrating government APIs and Streamlit interface to solve the pain point of opaque urban parking information.
- Designed automated data pipelines for daily data collection and cleaning, establishing a robust historical database to support long-term trend analysis.
- Applied statistical analysis on historical data to predict parking availability across different time slots, providing drivers with concrete decision-making basis to optimize mobility efficiency.

Sports Betting Freerider[GitHub](#)

- Developed an automated crawler system driven by Line Bot, integrating iOS Shortcuts to achieve zero-friction data triggering and collection processes.
- Architected a modern data stack connecting Python crawlers, BigQuery, and Google Sheets to ensure real-time data performance and scalability.
- Established a performance tracking dashboard to analyze prediction accuracy, quantifying unstructured information into metrics to drive data-driven investment decisions.

Skills _____

Data Analysis & ML: Python, SQL, Time Series, Linear Programming, Tree-based Models, Causal Forest

Visualization & Dashboards: Tableau, Streamlit, Matplotlib, Seaborn

Data Engineering & Automation: GCP, Docker, Airflow, Google Apps Script, VBA

Domain Expertise: A/B Testing, Causal Inference, Econometrics, Game Theory, Social Network Analysis

Language: TOEIC Gold Certificate 870

Awards _____

Outstanding Employee	CarPlus, Yulon Group Jan 2026
Presidential Award	College of Social Sciences, NTU June 2020
Presidential Award	College of Liberal Arts, NTU June 2017
